AI-FIRST ENTERPRISE TRANSFORMATION | CONSULTING ENGAGEMENT

Roadmap, Financial Model, KPIs & Risk Register

From decision to delivery: the executable plan

Contents of this deliverable

- Delivery roadmap: 30/90-day plans and 6/12/24/36-month horizons
- Investment and cost model with benefits realization plan
- KPI framework and executive steering dashboard
- Risk register with mitigations
- Board presentation outline

Deliverable 06 | July 2026 | Draft for discussion

Illustrative engagement package. Assumptions stated in Deliverable 00 apply throughout.

1. Delivery Roadmap

First 30 days - mobilize

- Appoint transformation leader; charter CoE and governance bodies; confirm executive sponsors per lighthouse.
- Launch discovery sprint: validate assumptions, baseline metrics for the five lighthouses, inventory in-flight AI work and shadow usage.
- Publish interim AI acceptable-use policy and data-classification guardrails (stops the bleeding while full governance lands).
- Select AI gateway and initial model set; stand up sandbox environment; begin vendor contract remediation (data-use, indemnity terms).
- Communicate workforce principles enterprise-wide before rumor fills the vacuum.

First 90 days - foundations and first proof

- Platform core v1 live: gateway, logging/tracing, evaluation harness v1, first golden-path template.
- Governance operating: risk tiering in force, use-case inventory live, RAI Board reviewing first Tier-2 cases.
- Lighthouses 1-3 in build (service copilot, engineering assist, knowledge platform v1); engineering assist in production for first 200 developers.
- Skills wave 1: champions network recruited; manager workshop pilot; all-employee AI fluency module launched.
- Portfolio Board operating with kill criteria; benefits-audit method agreed with Finance.

Horizon	Milestones (exit criteria)	Key dependencies	Principal risks
6 months	3 lighthouses in production; knowledge platform serving 2 use cases; 30% of knowledge workers active weekly on governed tools; first audited benefits reported	Data-source access approvals; identity integration; hiring of anchor CoE roles	Discovery reveals worse data quality than assumed (buffer: scope H1 to best-data domains)
12 months	Maturity Level 3 achieved; 8-12 production use cases; first A1 agents live in service and IT ops; semantic layer v1 (~50 metrics); benefit run-rate $25-40M gross	Platform golden paths stable; BU pods staffed; eval suites mature	Adoption plateau at enthusiasts (counter: manager incentives, friction telemetry)
24 months	Maturity Level 4; 25-40 production use cases; A2 agents in bounded domains; product-based funding fully adopted; cumulative net position near breakeven; first AI-embedded product feature in market	Governance scaling without queueing; knowledge-engineering throughput; talent retention	Governance bottleneck or a public AI incident (counter: two-speed model, incident playbooks, red-teaming)
36 months	AI-native operations in 2-3 selected processes (A3 in bounds); AI-embedded products contributing revenue; CoE shrunk as designed; cumulative net benefit $70-130M; maturity Level 5 markers present	Sustained exec sponsorship across budget cycles; regulatory landscape absorbed	Strategy drift after leadership change (counter: board-level KPI reporting, institutionalized operating model)

2. Investment and Cost Model (Illustrative)

Category	Yr 1	Yr 2	Yr 3	Notes
Platform & infrastructure (gateway, vector/RAG stack, observability, GPU/inference)	$8-11M	$10-14M	$9-13M	Consumption grows with usage; FinOps offsets 15-25% via routing/caching
Model & software licensing	$3-5M	$5-8M	$6-9M	Multi-vendor; unit costs trending down, volume trending up
Talent (CoE, platform, pods - net new & backfill)	$9-12M	$12-16M	$10-13M	~45-60 dedicated FTEs at peak plus federated capacity
Data & knowledge engineering	$3-5M	$4-6M	$3-5M	Semantic layer, ingestion pipelines, expert-knowledge capture
Change, skills & communications	$3-4M	$3-4M	$2-3M	Includes reskilling co-funding commitment
Governance, security & assurance	$2-3M	$2-3M	$2-3M	Tooling + assurance capacity in risk/audit
Total investment	**$28-38M**	**$35-48M**	**$30-42M**	Released in tranches against value gates

Benefits realization plan

Benefit stream	Steady-state share	How it is counted
Productivity & cost-to-serve (service, engineering, finance ops, IT)	~55%	Pre-registered baselines; Finance-audited; counted at realization (capacity redeployed or cost removed), not at tool rollout
Revenue (win-rate, personalization, AI-embedded product features)	~30%	Attribution via controlled rollouts / holdout groups where feasible; conservative haircuts applied
Risk, quality & speed (error reduction, faster close, compliance efficiency)	~15%	Quantified where defensible; otherwise reported as non-financial KPIs, never double-counted

Governing rule: the program reports **net** value after platform and run costs, and the Portfolio Board publishes kill decisions alongside wins - credibility is a compounding asset.

3. KPI Framework and Executive Steering Dashboard

Layer	KPIs (steering set)	Target trajectory
Value	Audited net benefit ($); benefit run-rate vs plan; % benefits Finance-verified	Breakeven months 20-27; 100% verification
Adoption	Weekly active governed-AI users (% knowledge workforce); use cases in production; median tasks/user	30% by mo 6, 60% by mo 12, 80%+ by mo 24

Layer	KPIs (steering set)	Target trajectory
Delivery	Median idea-to-production time; % initiatives on paved road; platform availability	<30 days by mo 18; >90% paved-road
Quality & trust	Eval pass rates; hallucination/critical-error rate per 1,000 outputs; CSAT delta on AI-touched journeys; incident count & severity	CSAT never negative as hard gate; declining error rates
Risk & compliance	% AI systems inventoried & tiered; Tier-1 reviews on time; audit findings; deletion-propagation SLA	100% inventory; zero overdue Tier-1 reviews
People	Certified practitioners; internal mobility from affected roles; sentiment index; attrition in key AI roles	Reskilling commitments met; key-role attrition <10%
Economics	Cost per unit of work (per resolved ticket, per PR, per document); token spend vs budget	Unit costs declining quarter over quarter

The Executive Steering Dashboard presents exactly these seven rows monthly, one page, red/amber/green with trend arrows, plus the top three decisions needed. Anything longer will not be read.

4. Risk Register (Top 10)

#	Risk	L	I	Mitigation / owner
1	Value not realized: pilots scale activity, not audited P&L; impact	M	H	Benefits-audit discipline; kill criteria; product funding - CFO
2	Public AI incident (harmful output, data leak) damages brand/regulatory standing	M	H	Risk tiering, eval & red-team gates, incident playbooks, comms readiness - CRO/CISO
3	Adoption stalls at enthusiast layer; middle management disengaged	H	H	Manager incentives & toolkits; friction telemetry; co-design - CHRO
4	Data quality/access worse than assumed, delaying Horizon 1	H	M	Discovery sprint validation; scope lighthouses to best-data domains; data-product funding - CDO
5	Governance becomes a queue; teams route around it (shadow AI persists)	M	H	Two-speed model; Tier-3 self-service; 2-week exception SLA - GC/CRO
6	Key-talent scarcity/attrition in AI engineering and evaluation roles	H	M	Anchor hires + aggressive internal development; retention plans - CHRO/CTO
7	Vendor lock-in or adverse contract terms (data use, IP, pricing)	M	M	Model-agnostic gateway; contract standards; annual portability test - CTO/Procurement
8	Regulatory shift (AI Act enforcement, sector rules) invalidates deployments	M	M	Obligations register; inventory & logging as compliance backbone; regulatory watch - GC
9	Cost overrun: token/GPU spend scales faster than value	M	M	FinOps guardrails; routing to smaller models; unit-economics review - CFO/CTO
10	Transformation fatigue / leadership change breaks continuity	M	H	Board-level KPI reporting; institutionalized operating model; staged wins narrative - CEO

L = likelihood, I = impact (H/M/L). Register reviewed monthly by Portfolio Board; Tier-1 risks reported to the Board's risk committee quarterly.

5. Board Presentation Outline (12 slides)

Slide	Content
1	The strategic question: capability to absorb AI is the moat - and the 12-24 month window
2	Where we are: maturity Level 2, pilot sprawl, shadow AI, data constraint (one honest page)
3	The AI-First vision, 2029: customer, workforce, process, product, decisions
4	Five pillars of the transformation and why they must move together
5	The opportunity portfolio: impact-vs-effort matrix and the five lighthouses
6	The platform strategy: one paved road; buy commodity, build advantage
7	Governance and trust: two-speed control, agent identity, auditability
8	People: operating model, skills, and our workforce principles
9	Roadmap: three horizons with value gates and kill discipline
10	Economics: investment envelope, benefits plan, breakeven trajectory
11	Top risks and how we govern them
12	Decisions requested today (funding tranche 1, leadership appointment, governance adoption)

Recommended board ask: approve direction and Tranche 1 only. Asking for 36 months of money on day one invites a no; asking for gated tranches against audited value invites a partnership.
