

AI Opportunity Portfolio & Prioritization

Where the value is, and in what order to capture it

Contents of this deliverable

- Portfolio method: value cases, not use cases
- Opportunity inventory across 16 business functions
- Deep-dive cards for the five lighthouse candidates
- Impact vs. Effort prioritization matrix and sequencing logic

1. Portfolio Method

Each opportunity is assessed on business value, complexity, technical feasibility, required data, AI technique, expected ROI horizon, and principal risks. Two disciplines matter more than the list itself: **(1)** benefits are counted only when audited by Finance against a pre-registered baseline, and **(2)** every funded opportunity must consume the shared platform (Deliverable 03), so each use case makes the next one cheaper.

2. Opportunity Inventory by Function

Function / opportunity	Value driver	Value	Complexity	Data required	Technique	ROI horizon
Customer service - AI resolution & agent copilot	40-70% faster handling; 30-60% autonomous deflection on routine intents	VH	M	Interaction history, KB, order/CRM systems	RAG + tool-using agents	6-12 mo
Software engineering - AI-assisted SDLC	20-40% cycle-time gain; higher review coverage	VH	L-M	Code repos, tickets, CI/CD telemetry	Code assistants + agentic PR review	3-9 mo
Sales - intelligence & proposal automation	5-12% win-rate lift; 30-50% less admin per rep	H	M	CRM, call transcripts, win/loss, pricing	RAG + generation + scoring	6-12 mo
Marketing - content ops & personalization	3-8x content throughput; segment-of-one campaigns	H	M	Brand corpus, campaign performance, consented CDP data	Generation + brand-tuned eval	3-9 mo
Finance - close automation & FP&A; copilot	30-50% faster close tasks; narrative reporting on demand	H	M-H	ERP GL, sub-ledgers, planning models	Agents + structured retrieval; deterministic checks	9-18 mo
Finance - AP/AR & contract-to-invoice matching	Touchless invoice rate to 70-85%	M-H	M	Invoices, POs, contracts	Document AI + rules + LLM exception handling	6-12 mo
HR - talent acquisition & internal mobility	30-50% faster screening; better internal matching	M-H	M	Job architecture, skills taxonomy, HRIS	Matching + generation; strict human decision rights	9-18 mo
Legal - contract review & clause intelligence	50-70% faster first-pass review	M-H	M	Contract repository, playbooks, precedent	RAG + extraction + redline suggestion	6-12 mo
Procurement - spend intelligence & sourcing	2-5% addressable-spend savings	M-H	M	Spend cube, supplier master, market data	Classification + negotiation-prep agents	9-18 mo
Supply chain - demand sensing & disruption watch	10-20% forecast-error reduction; earlier disruption response	H	H	Orders, POS, logistics, external signals	ML forecasting + LLM signal fusion	12-24 mo
Manufacturing/ops - quality & maintenance	15-30% unplanned-downtime reduction	H	H	Sensor/IoT, maintenance logs	Predictive ML + technician copilot	12-24 mo

Function / opportunity	Value driver	Value	Comple xity	Data required	Technique	ROI horiz
IT ops - AIOps & self-service	40-60% L1 ticket deflection; faster MTTR	H	M	ITSM tickets, observability telemetry, runbooks	RAG + remediation agents (guarded)	6-12
Cybersecurity - triage & detection engineering	50-70% faster alert triage	H	M	SIEM/SOAR data, threat intel	LLM triage + enrichment agents	6-12
Knowledge management - enterprise brain	Foundational multiplier for all other cases	VH (e nablin g)	M-H	Documents, wikis, tickets, transcripts	Ingestion + RAG + permissions-aware search	6-12
Risk & compliance - monitoring & reg-change	60-80% faster regulatory impact analysis	M-H	M	Policy corpus, regulatory feeds, controls library	RAG + classification + workflow	9-18
Executive decision support - enterprise copilot	Faster, evidence-linked decisions	H	H	Semantic layer over governed metrics	Text-to-analytics + narrative synthesis	18-30 mo

Value/Complexity: VH very high, H high, M medium, L low. ROI horizon = time from build start to audited net benefit.

3. Lighthouse Deep-Dive Cards

Lighthouse 1 - Customer Service AI (copilot first, autonomy second)

Aspect	Detail
Approach	Phase A: agent-assist copilot (suggested answers, auto-summarization, next-best-action). Phase B: autonomous resolution for top 10-20 routine intents with confidence thresholds and instant human escalation.
Expected ROI	Cost-to-serve down 25-40% in covered intents by month 18; CSAT neutral-to-positive as a hard gate.
Key risks	Hallucinated policy answers (mitigate: retrieval-grounded with citation checks, refusal on low confidence); agent morale (mitigate: position as augmentation, involve agents in design).
Why first	Rich data, measurable baseline, high visibility, and it forces the knowledge platform to be built properly.

Lighthouse 2 - AI-Assisted Software Engineering

Aspect	Detail
Approach	Governed coding assistants for all engineers; agentic code review and test generation in CI; migration agents for legacy remediation as a Horizon 2 extension.
Expected ROI	15-30% throughput gain measured by cycle time and change failure rate - never by lines of code.
Key risks	Insecure generated code (mitigate: security scanning in CI, provenance tagging); license contamination (mitigate: policy + tooling).
Why first	Fastest time-to-value in the portfolio and it builds the internal skill base the platform team needs.

Lighthouse 3 - Enterprise Knowledge Platform

Aspect	Detail
Approach	Permissions-aware ingestion of documents, wikis, tickets, and call transcripts into a governed retrieval layer; exposed as a service to every other use case via the platform.
Expected ROI	Indirect but foundational: measured via search success rate, time-to-answer, and reuse by downstream use cases.
Key risks	Over-permissive retrieval leaking sensitive content (mitigate: document-level ACL enforcement at query time, not index time only).
Why first	Every ambitious use case dies without it; building it once prevents 20 teams building it badly.

Lighthouse 4 - Finance Close & FP&A; Copilot

Aspect	Detail
Approach	Reconciliation and flux-analysis agents with deterministic validation; narrative reporting drafted by AI, approved by controllers.
Expected ROI	2-4 days off monthly close tasks; analyst capacity shifted from assembly to analysis.
Key risks	Errors in financial reporting (mitigate: AI drafts, humans certify; full audit trail; SOX-aligned controls).
Why first	Creates a credible, CFO-sponsored proof that AI works under control-heavy conditions - unlocking governance trust.

Lighthouse 5 - IT Ops & Security Triage

Aspect	Detail
Approach	RAG over runbooks and ticket history for L1 deflection; alert-triage agents that enrich and prioritize but do not auto-remediate in Phase A.
Expected ROI	40-60% L1 deflection; 30-50% triage-time reduction in the SOC.
Key risks	Automated actions causing outages (mitigate: read-only Phase A; graduated autonomy per Deliverable 04).
Why first	IT is a willing early adopter and the telemetry to measure impact already exists.

4. Impact vs. Effort Prioritization

Quadrant	Opportunities	Decision rule
Quick wins (high impact, low-med effort)	SW engineering assist; customer-service copilot; marketing content ops; IT/SOC triage	Fund now; production within 2-3 quarters
Strategic bets (high impact, high effort)	Knowledge platform; finance close; supply chain sensing; autonomous service resolution	Fund now with staged gates; 12-24 month value horizon
Fill-ins (moderate impact, low effort)	Meeting/document summarization; HR policy assistant; sales-call summaries	Deliver via platform self-service, minimal central investment

Quadrant	Opportunities	Decision rule
Deprioritize (low impact or unready)	Executive enterprise copilot (until semantic layer exists); fully autonomous HR decisions (regulatory); moonshot product bets without data	Revisit at 12-month portfolio review

Sequencing logic: quick wins fund credibility, strategic bets build the moat, and the platform mandate ensures the two share infrastructure. The portfolio is rebalanced quarterly by the AI Portfolio Board (Deliverable 05) with explicit kill criteria - a pilot that cannot show a path to audited value within two quarters is stopped and harvested for lessons.
